

GPA Midstream Technical Committee Charter:

Analysis, Test Methods & Product Specifications

Purpose

Ensures GPA Midstream maintains standardized, industry accepted, analytical test methods, and product specifications

Scope

Responsible for all technical matters concerning hydrocarbon product analysis, test methods, and product specifications

Area of Responsibility

- Develop and maintain analytical procedures, test methods, and product specifications
- Evaluate analytical method performance through round robin testing and develop precision statements using the test data
- Perform third party research to enhance and improve analytical test methods
- Facilitate the GPA Midstream School of Gas Chromatography
- Provide a forum for analytical personnel from member companies to share practices related to product analysis, specification testing, and laboratory practices

Forum Structure

- The committee has two in-person meetings: (1) GPA Midstream Annual Convention in the fall and (2) GPA Midstream Technical Conference in the spring.
- Monthly coordination meetings by the committee chair are held along with workgroup specific meetings for respective members.
- The committee hosts a technical forum consisting of three to four presentations at the spring GPA Midstream Technical Conference. This is organized and hosted by Analysis, Test Methods & Product Specifications Committee representatives on the Technical Conference Planning Committee.
